

PowerTap™

The Total Power Solution

Onsite Hydrogen Generation Station

PowerTap is a complete system for hydrogen generation, compression, storage, and dispensing. This onsite system will generate hydrogen at the lowest possible cost compared to delivered hydrogen. **PowerTap** also enables operations to be fully self-sufficient eliminating the need to rely on others to maintain a vital hydrogen supply.

Why PowerTap?

PowerTap is designed to fulfill all hydrogen generation and storage requirements, working seamlessly with the **ReadyPower™** hybrid fuel cell unit. The hydrogen generation module, compression and storage module, and dispenser unit are completely integrated together to make a fully-functional, onsite hydrogen generating supply system. With a complete system from one-source, installation and service are simplified with one point of contact for any operational need.

24/7 Remote Monitoring

- Monitoring operations from a remote location saves the time of physical inspections
- 24/7 monitoring continually tracks system performance
- Real-time information enables quick reaction time with local support, guidance, and service reducing any operational interference

Strategic Dispensing

- Dispensing units can be decentralized from main **PowerTap** system to be closer to forklift operations minimizing travel time

Constant Power. Always Ready.
